1611 Duke University Road, Apt. F9
Durham, NC 27701

PROFILE

I believe that design and audience interaction are central to creating functional and clear data visualizations that tell exciting stories and open eyes to new perspectives. I'm passionate about telling stories with data to enhance our understanding of the world around us. I work with a wide variety of data sources from those rooted in humanities research and creative industries to public health and more. I have the unique ability to communicate the benefits of using strong design principles and creative data usage to both data specialists and beginners. I primarily work in and teach using Tableau and have a strong interest in connecting UX and UI design.

PROFESSIONAL EXPERIENCE

Data Visualization Designer & Consultant

Duke Global Health Innovation Center, Duke University // Jan 2021 - present

- Designing interactive data visualizations and storyboards for the Launch and Scale Speedometer Initiative
- Advising collaborators on data structures, organization, and communication
